Origami dog face

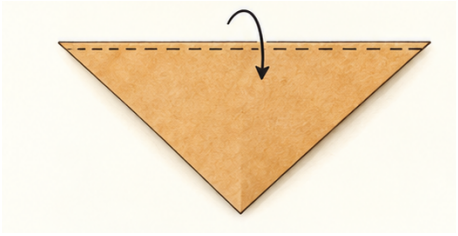

Thin 15 × 15 cm square, colored on one side. A pencil for optional decoration. No glue or scissors for folding.

Dashed line: new fold. Fine line: existing crease. Arrow: movement.

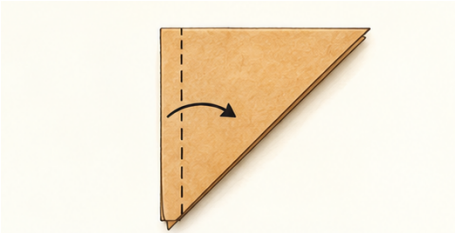

1. Prepare the square

Place a 15 × 15 cm square pale side up, with one corner pointing down.

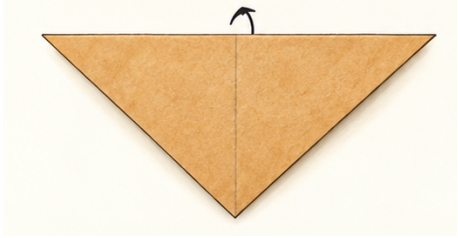

2. Make the triangle

Bring the top corner onto the bottom corner. Match the two sloping edges, then press the horizontal fold.

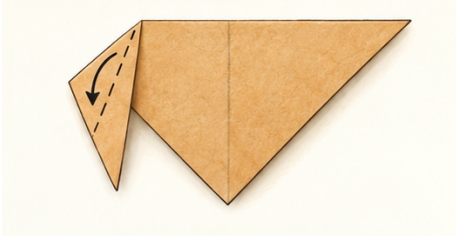

3. Mark the middle

Bring the left corner onto the right corner through both layers. Press the new fold lightly.

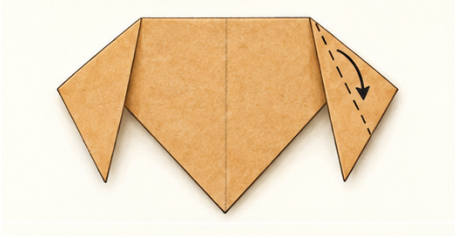

4. Open the reference fold

Open only the fold from step 3. Lay the wide triangle flat, keeping the bottom point facing down.

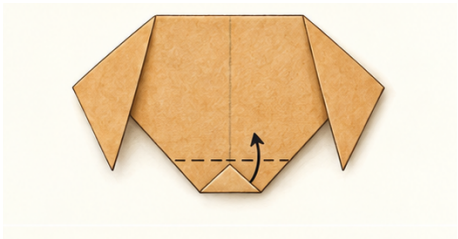

5. Lower the left ear

Fold the left corner down and slightly outward through both layers. Leave the center crease uncovered.

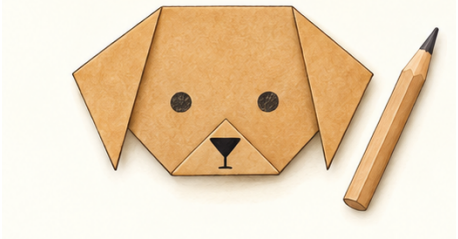

6. Match the right ear

Fold the right corner down through both layers. Compare both ear tips before pressing the second sloping fold.

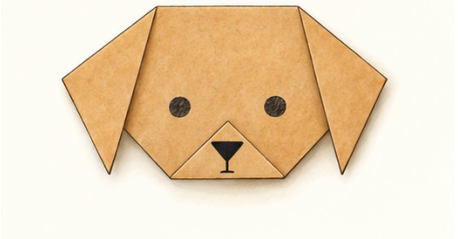

7. Shorten the chin

Lift the bottom point through both layers and fold it a short distance upward. Keep its tip on the center crease.

8. Draw the face

Draw two eyes above the chin flap and a small nose on its upward tip. Add a short mouth if you wish.

9. Check the finished dog

Lay the dog flat. Press each existing ear fold and the chin fold, supporting their bases rather than pulling their tips.
