Practice: form and overlap

1. Draw two round heads with ribbon and axis: one straight, one slightly turned. Mark eyes, then lighten guides.

2. Put an egg shape behind a broad curved ribbon. Choose the foreground form and erase the hidden edge; repeat with the order swapped.

Check: do eye ticks share one ribbon on either side of the axis? Does the rear edge stop at the foreground ribbon?

Your drawing and a new application

3. Build a seated kitten from a head and body egg. Check eye ticks and paw edge stopping at tail, then remove supports.

4. Choose front view, lowered head or side profile. Place new head guides before details and explain one overlap.

Explain: how did the head axis change? Where did the new ribbon place the eye? Which hidden edge did you erase, and why?
