Dinosaur corner bookmark

Storyboard · 1–3

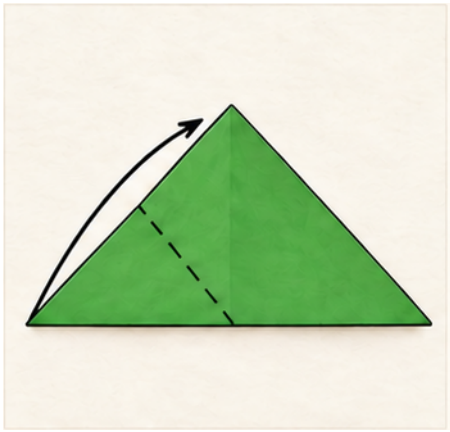

1. Fold the diagonal

Place the square pale side up. Bring the bottom corner to the top; match the edges and press.

Why: The colored side will face outward.

Check: A green triangle points up; its long folded edge lies below.

Repair: Open the fold and align the two tips before smoothing outward.

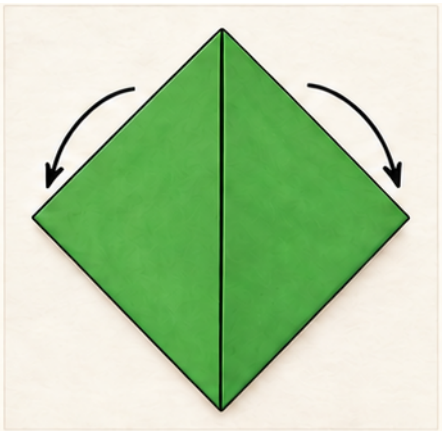

2. Raise the left corner

Bring the left base corner to the top apex. Align its lower edge with the triangle’s center line.

Why: This crease marks the left pocket wall.

Check: The left tip meets the apex without crossing it.

Repair: Lift the flap and match the apex before pressing the hinge.

3. Mark the right crease

Bring the right base corner to the apex. Press, then reopen both side flaps to restore the wide triangle.

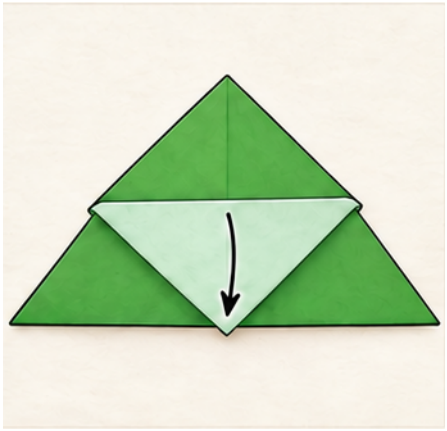

Why: Both creases will guide the final tucks.

Check: A wide triangle has two diagonal guide creases.

Repair: Reopen only the two side folds; keep the first diagonal closed.

Dinosaur corner bookmark

Storyboard · 4–6

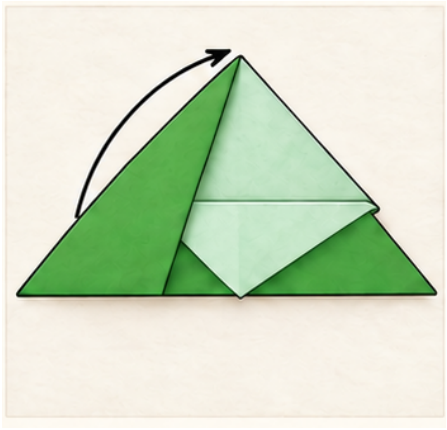

4. Lower one layer

Separate the two top tips. Bring only the front tip down to the midpoint of the long base edge.

Why: The folded layer makes the front wall of an open pocket.

Check: The rear triangle still points up; a pale front flap points down.

Repair: If the rear tip also moved, open this fold and separate the layers.

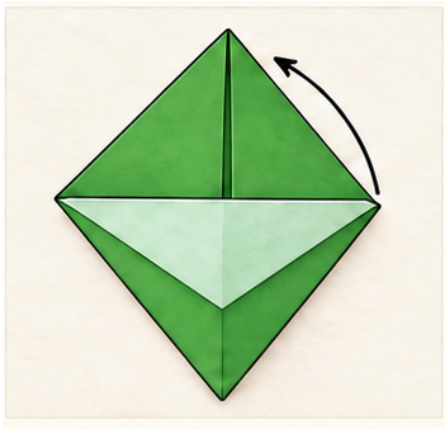

5. Raise the left flap

Bring the left base corner back to the rear apex along its existing crease.

Why: A familiar crease keeps the flap aligned with the pocket.

Check: One green flap points up; the pale pocket wall stays below it.

Repair: Release the flap if it pulls the pale front layer upward.

6. Raise the right flap

Bring the right base corner to the same apex along its crease. Keep the two tips separate.

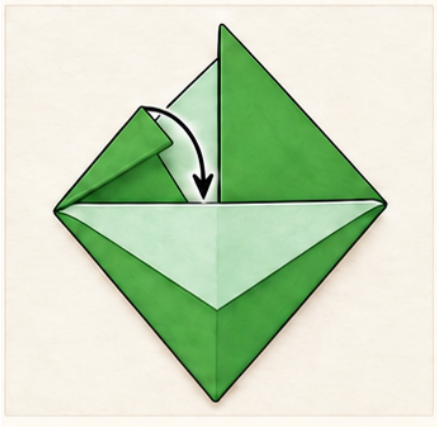

Why: Separate tabs can tuck one at a time without crumpling.

Check: A diamond has two loose green tips above the pocket.

Repair: Reopen the right flap and follow its first crease, not the pocket edge.

Dinosaur corner bookmark

Storyboard · 7–9

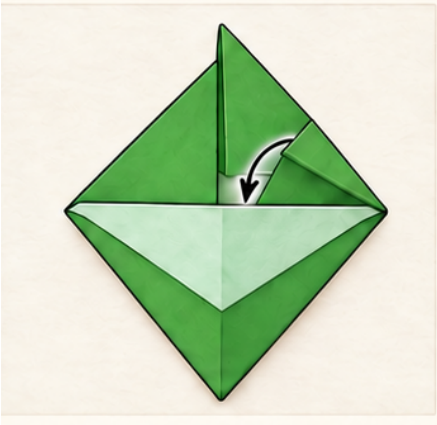

7. Tuck the left tip

Bend the left upper tip down. Slide it behind the pale pocket wall; flatten its outer crease gently.

Why: The tab turns inside the pocket instead of lying on its front.

Check: The left loose tip disappears; the right tip still points up.

Repair: Lift the pocket rim a little. Stop if the tip catches rather than forcing it.

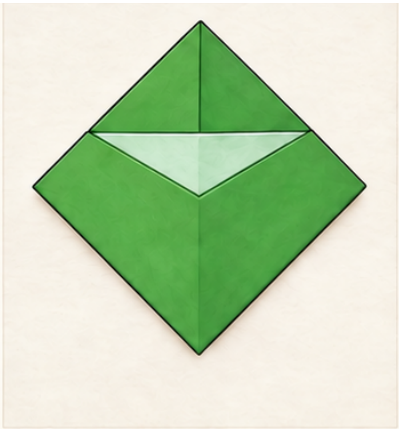

8. Tuck the right tip

Bend the right upper tip down into the same pocket. Keep the left tab inside while sliding the second one behind the rim.

Why: Both hidden tabs hold the bookmark together without glue.

Check: Neither tip sticks out above the pocket.

Repair: Back out the right tab and separate the opening from the already tucked left tab.

9. Flatten the pocket

Smooth the outer edges lightly. Leave the pocket mouth open; do not glue or seal its layers.

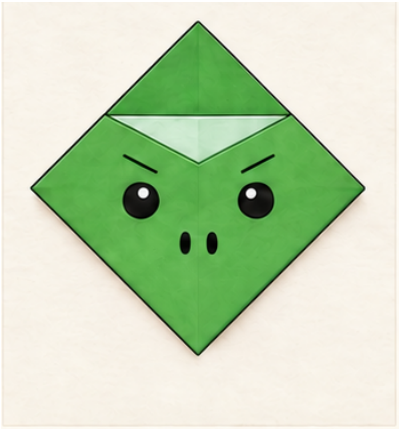

Why: A page needs space between the front and back walls.

Check: A flat diamond has a small opening along its upper sides.

Repair: Use a fingertip to separate the mouth without pulling out the tabs.

Dinosaur corner bookmark

Storyboard · 10–12

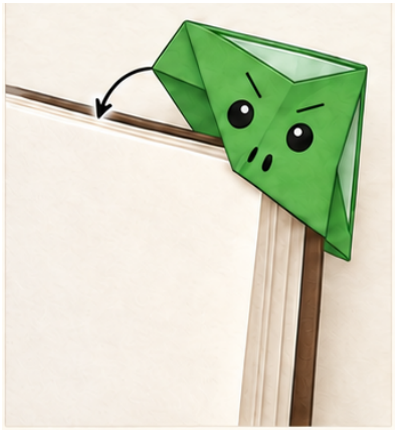

10. Draw the dinosaur face

Keep the diamond upright. Draw two eyes, two short eyebrows and two small nostrils on the green front below the pocket.

Why: The face gives the plain folded bookmark its dinosaur theme.

Check: The pocket is clear of pencil marks and all decoration lies on the outside.

Repair: Test the face lightly in pencil before darkening the marks.

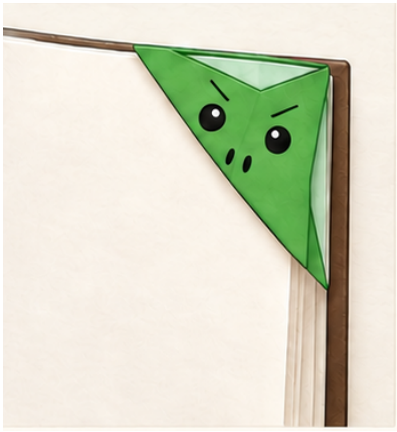

11. Fit one page corner

Slide the pocket over the upper right corner of one page. Support the page while easing the bookmark into place.

Why: The test reveals a closed pocket or a tab tucked into the wrong layer.

Check: The page corner enters the pocket without bending.

Repair: Remove the bookmark, reopen the mouth and check the two tucks at steps 7–8.

12. Check before closing

Close the book gently, then reopen it. Remove the bookmark by sliding it away from the corner.

Why: A flat, dry bookmark should not catch or mark the page.

Check: The page remains flat and the drawn face stays on the front.

Repair: If it catches, remove it and smooth the outer folds; use dry pencil instead of wet ink.

Try independently: Use a fresh 12 × 12 cm square without the pictures. Predict which layer makes the pocket, tuck both tabs and test one page corner before drawing a different dinosaur expression.
