

Origami fish

Waterbomb base and crossed tail

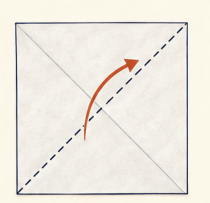

Thin 15 × 15 cm square, colored front and pale reverse. No scissors or glue.

Dashed line: new fold; fine line: earlier crease; arrow: movement.

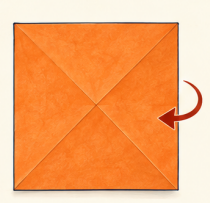

1. Crease the first diagonal

White side up. Match the top-left corner to the bottom-right, crease diagonally and unfold.

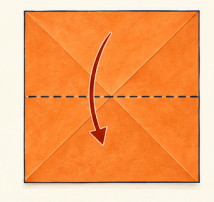

2. Crease the other diagonal

Match the top-right corner to the bottom-left, crease and unfold the square.

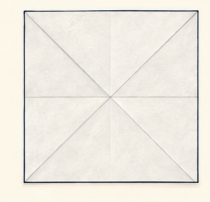

3. Turn the sheet over

Turn the whole open square over, colored side up; keep its edges horizontal.

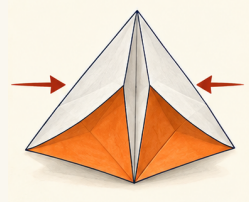

4. Crease across the middle

Match the top edge to the bottom edge, crease across the center and unfold.

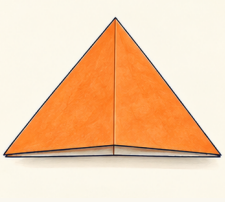

5. Turn back to the lighter side

Turn the whole open sheet white side up, keeping its edges horizontal.

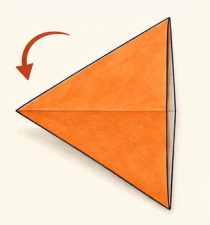

6. Bring the side midpoints together

Bring the side midpoints inward; tuck the side panels inside. Leave the base raised for now.

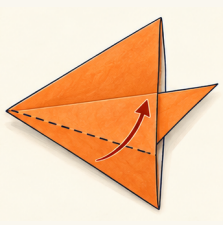

7. Flatten the triangle

Bring the upper and lower tent panels together; flatten along the creases into a double triangle.

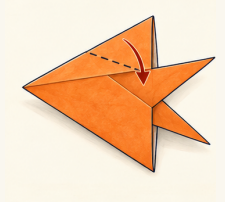

8. Rotate on the table

Rotate the triangle on the table until its point faces left and open edge faces right.

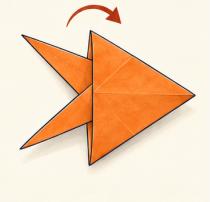

9. Fold only the front lower flap

Fold only the lower front flap diagonally upward; its tip must project beyond the right edge.

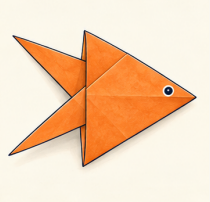

10. Cross the front upper flap

Fold only the upper front flap diagonally downward across the first; its tip also projects right.

11. Turn the whole fish over

Turn the whole fish over: the intact triangular body faces you and the tail points left.

12. Add an eye if you like

Draw a small eye near the right point; check the body and both tail tips.
