Practice: a basket of balls

1. Draw two circles and swap the front one. Erase the newly hidden edge.

2. Construct oval rim thickness and one broad-ribbon interlace.

Point to an erased hidden edge and explain your new decision. If you chose shading, identify the source, form shadow and cast shadow.

Your drawing and a new application

3. Draw your own basket with three balls, from guides to a clean simple finish.

4. Lower the viewpoint, move the right ball forward or move light right. Solve the new condition before finishing.

Point to an erased hidden edge and explain your new decision. If you chose shading, identify the source, form shadow and cast shadow.
