

Dinosaur corner bookmark

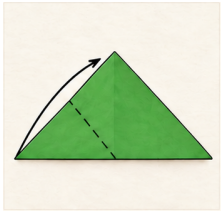

One 15 × 15 cm square of thin paper and a dry pencil. No glue or cutting.

Dashed: new fold; fine line: earlier crease; arrow: movement.

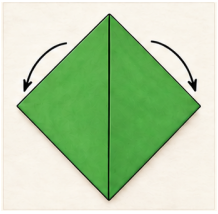

1. Fold the diagonal

Place the square pale side up. Bring the bottom corner to the top; match the edges and press.

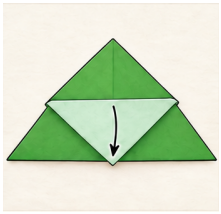

2. Raise the left corner

Bring the left base corner to the top apex. Align its lower edge with the triangle's center line.

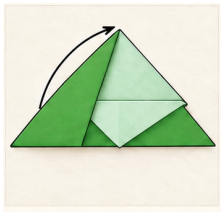

3. Mark the right crease

Bring the right base corner to the apex. Press, then reopen both side flaps to restore the wide triangle.

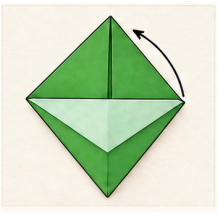

4. Lower one layer

Separate the two top tips. Bring only the front tip down to the midpoint of the long base edge.

5. Raise the left flap

Bring the left base corner back to the rear apex along its existing crease.

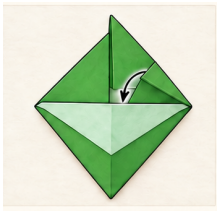

6. Raise the right flap

Bring the right base corner to the same apex along its crease. Keep the two tips separate.

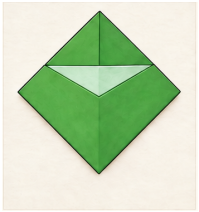

7. Tuck the left tip

Bend the left upper tip down. Slide it behind the pale pocket wall; flatten its outer crease gently.

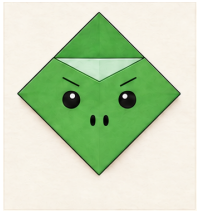

8. Tuck the right tip

Bend the right upper tip down into the same pocket. Keep the left tab inside while sliding the second one behind the rim.

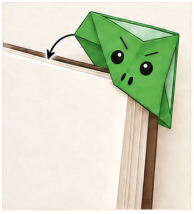

9. Flatten the pocket

Smooth the outer edges lightly. Leave the pocket mouth open; do not glue or seal its layers.

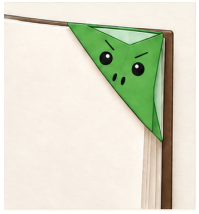

10. Draw the dinosaur face

Keep the diamond upright. Draw two eyes, two short eyebrows and two small nostrils on the green front below the pocket.

11. Fit one page corner

Slide the pocket over the upper right corner of one page. Support the page while easing the bookmark into place.

12. Check before closing

Close the book gently, then reopen it. Remove the bookmark by sliding it away from the corner.
