

Practice: form and overlap

1. Try two curves on a simple mass. A crosswise stripe wraps around the rounded balloon. Its curve stays within the same oval and reaches its side edges.

2. Overlap two ovals, choose the front one and erase the rear edge. Swap the order in a second trial.

The curve endpoints stay on one mass; explain what the curve shows.

Your drawing and a new application

3. Choose the foreground balloon and stop the rear outline at it. Name the foreground form before erasing.

4. The front balloon is higher: Move the front balloon higher and the rear one lower. Place new ovals, then choose where the rear right edge stops.

Name the changed condition, point to a curve on your new mass and show where the rear edge stops. Explain which guide you erased after checking.
